EzTape 2.01 Software Notes

EzTape Release 2.01 enhances previous EzTape 2.0 software in several respects:

1. For DOS 4.0 environments: Release 2.01 allows automatic installation of EzStart as described in the manual.

2. For European systems: Release 2.01 automatically accommodates European date formats.

3. For network environments: Release 2.01 corrects handling of those files following zero-byte length files. (Item 6 of the EzTape 2.0 Software Notes described this problem.)

IMPORTANT

1. EzTape 2.01 does not support Irwin 10-megabyte tape drives.

2. EzTape 2.01 requires DOS 3.0 or greater.

Unique to DOS 4.0

EzStart will automatically execute batch/parameter files at the DOS prompt **only**. This means you must exit any active program and back out of the DOS shell (press F3 until you reach the DOS prompt).

Unique to Networks

IBM® hidden system files should **not** be restored when recreating the network server. To prevent erroneous restore, edit the RESTALL.BAT file to the following:

```
/t C:\ /k /b /b rh /q /s 1:\*.*
```

Alternatively, you can perform the restore using the EzTape menus. Using this method, select all files for restore; then use F7 to UNselect network hidden and system files.
